

@ShipMail

Optimize your email

**Delivering the Message.
Wherever. Whenever.**

ShipMail assists ship owners and managers to achieve better efficiency in their communications.

ShipMail includes vital services, such as information security, message routing, information storage, eNoad handling, billing services, as well as statistical and analytical reporting, in its state-of-the-art platform.

@ShipMail
Optimize your email

ShipMail is Robust, Secure, Efficient and Reliable

The architecture of **ShipMail** balances proven technology, such as the Mobile Packet Data Services (MPDS) with new and emerging World-Link Communications proprietary technologies. You can surf the internet and send/receive email paying for the volume of exchanged data and not by the time spent online.

ShipMail incorporates ShipAV
World-Link Communications'antivirus software.

ShipMail is efficient compared to other applications on the market today as it leverages from the Company's unbeatable compression and Least-Cost-Routing technologies.

Unified messaging

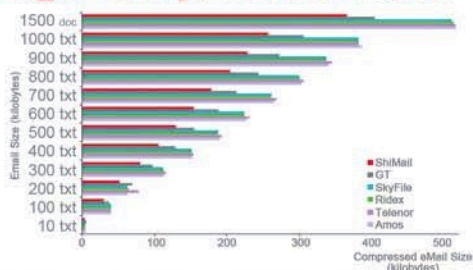

ShipMail is the all-in-one software to deliver your email, telex, fax & SMS.

Your advantage:

Maintain all your written communications within one software.

High compression rates

ShipMail's proprietary compression protocol achieves one of the best compression rates in the industry for both inbound/outbound traffic.

Your advantage:

Get more out of each MB!

Least Cost Routing

3G, FBB, VSAT, WIFI, MPDS, WiMax

ShipMail allows connectivity to ISDN & TCP/IP across a big number of satcom technologies. You can set your preferred connection type.

ShipMail's exclusive LCR technology selects the optimal of data transmission, based on message size & equipment.

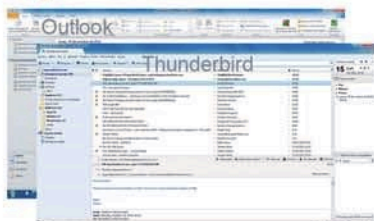

Your advantage:

Your vessel will always be connected via the lowest cost route.

No user training required

There is no extra training required, no learning curve.

Users can continue to use their favourite email client while retaining all ShipMail's features.

Your advantage:

Your vessel will have all ShipMail's benefits from the start!

Rules based security

ShipMail's rules system permits you to handle:

- Message size limit for both inbound/outbound traffic
- White & black lists
- Auto-send/receive rules to send/receive automatically

Your advantage:

Prevents excessive cost by streamlining communications.

Password based security

ShipMail features several password protected abilities:

- access to software
- access to modules
- ability to approve each message before sending outside.

Your advantage:

You can selectively allow who can establish communications.

Detailed reporting & logs

ShipMail provides a number of logs & reports that permits you to take account of any traffic:

- statistics panel
- audit report
- logs on sessions, messages & application's events.

Your advantage:

You can check for system usage online.

Remote setup

With ShipMail's web interface you can maintain your policies and update the software:

- user
- audit report
- vessel mailbox
- Vessel configuration files can be remotely uploaded/downloaded

Your advantage:

You don't need specialized personnel onboard to maintain the system!

Main Advantages

- .Fully compatible with ShipSat & ICafe
- .Least cost routing
- .Rules based security
- .High compression methods for mail packing
- .Remote setup/audit through web interface
- .Standalone & webmail versions
- .Remote software update
- .Bad & unread messages redirection to postmaster.
